

# DURASWEEPER® SNOW REMOVAL SYSTEM (DS-D20)

*Safely and Easily Remove Snow from your Fleet*

DuraSweeper® has a unique process for removing snow from commercial vehicle rooftops while minimizing risk of damage. DuraSweeper's automatic circuitry technology senses barriers on the rooftop and adjusts to optimally remove snow. This unique capability also allows for manual and automatic shutoff.

## Why Remove Snow from the Top of Your Fleet?

- Fuel savings – a snow load on the top of a vehicle can decrease fuel efficiency from 2-8%.
- Safety – 14 states have laws or pending legislation regarding the removal of snow from vehicle rooftops.
- Community stewardship - keep your company's reputation and concern for safety a top priority.

The DuraSweeper will help with fuel efficiency and ensure safe roads, while minimizing the liability for truck owners.

## Ease of Use

The vehicle operator need not exit the vehicle to actuate the DuraSweeper. The driver positions the cab to touch the actuation bar then drives forward to begin the removal process. The brush rises automatically to a height just inches above the rooftop so that, as the vehicle passes under the spinning brush, the DuraSweeper's patented flicking action removes snow quickly and easily.

DuraSweeper®	Specifications
Overall Size/Weight	Height (21'3"), Width (14'6"), Length (27'7")
Truck/Trailer Height	Up to 15' high
Energy Source	480 VAC with Canadian electrical options available
Snow Removal	Avg 4"-6" inches per pass
Transportability	Portable and Permanent options available
Temperature Rating	To -40 degrees C/F
Motor	20 HP
